

# Numerical Representation of Planetary Ephemerides

X. X. Newhall, Celestial Mechanics 45:305-310, 1989

## Computations

A handy function to compute the derivative of a Chebyshev polynomial.

```
In[25]:= DChebyshevT = Derivative[0, 1][ChebyshevT]
```

```
Out[25]= ChebyshevU[-1 + #1, #2] #1 &
```

This function computes matrix T from Newhall's equation (5). The parameter degree is the degree of the polynomial (N in Newhall), the parameter divisions is the number of subintervals of [-1, 1] (8 in Newhall).

```
In[26]:= NewhallT[degree_Integer, divisions_Integer] :=  
  Flatten[  
    Table[  
      {Table[ChebyshevT[j, i], {j, 0, degree}], Table[DChebyshevT[j, i], {j, 0, degree}]},  
      {i, 1, -1, -2 / divisions}},  
    {1, 2}]
```

This function computes matrix W used in Newhall's equation (8). The parameter w is the weight of the velocities relative to the positions (0.4 in Newhall).

```
In[27]:= NewhallW[divisions_Integer, w_Rational] :=  
  DiagonalMatrix[Flatten[Table[{1, w^2}, {divisions + 1}]]]
```

The following functions compute the four blocks of matrix C1 and assemble them to form C1.

```
In[28]:= NewhallC1UpperLeft[degree_Integer, divisions_Integer, w_Rational] :=  
  NewhallT[degree, divisions]^T . NewhallW[divisions, w] . NewhallT[degree, divisions]
```

```
In[29]:= NewhallC1UpperRight[degree_Integer] :=  
  Table[{ChebyshevT[i, 1], DChebyshevT[i, 1],  
    ChebyshevT[i, -1], DChebyshevT[i, -1]}, {i, 0, degree}]
```

```
In[30]:= NewhallC1LowerLeft[degree_Integer] := NewhallC1UpperRight[degree]^T
```

```
In[31]:= NewhallC1LowerRight[] := Table[0, {4}, {4}]
```

```
In[32]:= NewhallC1[degree_Integer, divisions_Integer, w_Rational] :=  
  ArrayFlatten[  
    {{NewhallC1UpperLeft[degree, divisions, w], NewhallC1UpperRight[degree]},  
     {NewhallC1LowerLeft[degree], NewhallC1LowerRight[]}}
```

The following functions compute the two blocs of matrix Subscript[C, 2] and assemble them to

form Subscript[C, 2].

```
In[33]:= NewhallC2Upper[degree_Integer, divisions_Integer, w_Rational] :=  
    NewhallT[degree, divisions]^T . NewhallW[divisions, w]
```

```
In[34]:= NewhallC2Lower[divisions_Integer] :=  
    Drop[IdentityMatrix[2 divisions + 2], {3, 2 divisions}]
```

```
In[35]:= NewhallC2[degree_Integer, divisions_Integer, w_Rational] :=  
    ArrayFlatten[{NewhallC2Upper[degree, divisions, w], {NewhallC2Lower[divisions]}}]
```

This function computes the matrix  $\text{Subscript}[C, 1]^{-1} \cdot \text{Subscript}[C, 2]$ . Newhall doesn't give it a name but calls its elements  $\text{Subscript}[c, k]$ , so let's use the name C.

```
In[36]:= NewhallC[degree_Integer, divisions_Integer, w_Rational] :=  
    Inverse[NewhallC1[degree, divisions, w]] . NewhallC2[degree, divisions, w]
```

This function expresses C in a way that is suitable for obtaining the coefficients of a polynomial in the monomial base, not in the Chebyshev base. It drops the last 4 rows corresponding to the Lagrange multipliers.

```
In[37]:= NewhallMonomialC[degree_Integer, divisions_Integer, w_Rational] :=  
    Table[  
    Sum[  
    NewhallC[degree, divisions, w][[n]]  $\times$  Coefficient[ChebyshevT[n - 1, x], x, k],  
    {n, 1, degree + 1}],  
    {k, 0, degree}  
    ]
```

## Formatting and Output

Produces a representation of a matrix as an initializer\_list containing initializer\_lists. (Note that this function is unused and might need to change, e.g., to use `std::array` if we wanted to use it.)

```
In[38]:= BidimMatrixToCDefinition[type_String, variable_String, matrix_List] :=  
    type <> " const\r\n      " <> variable <> "(\r\n" <>  
    StringReplace[  
    ToString[CForm[matrix]],  
    {"List(List(" → "      {{" ,  
    "List(" → "{",  
    ")," → "},\r\n      ",  
    "," → ",\r\n      ",  
    ")))" → "}}";\r\n\r\n"}]
```

Produces a representation of a matrix as a single, flattened initializer list.

```
In[39]:= FlattenedMatrixToCDefinition[type_String, element_String,
      dimension1_String, dimension2_String, variable_String, matrix_List] :=
"constexpr " <> type <> "<" <> element <> ", " <> dimension1 <> ", " <>
      dimension2 <> ">\r\n      " <> variable <> "(\r\n      std::array<" <>
      element <> ", " <> "(" <> dimension1 <> ") * (" <> dimension2 <> ")>{\r\n" <>
StringReplace[
ToString[CForm[matrix]],
{"List(List(" → "      {",
"List(" → "\r\n      ",
")," → ",\r\n",
", " → ",\r\n      ",
")" → "});\r\n\r\n"}]
```

Produces a representation of a list as an initializer list.

```
In[40]:= ListToCDefinition[type_String, variable_String, list_List] :=
      type <> " const\r\n      " <> variable <> "(\r\n" <>
StringReplace[
ToString[CForm[list]],
{"List(" → "      {",
", " → ",\r\n      ",
")" → "});\r\n\r\n"}]
```

Writes all the Newhall C matrices to a single file. Note that we drop the last 4 rows because they correspond to the Lagrange multipliers.

```

In[41]:= file =
  OpenWrite[
    FileNameJoin[{DirectoryName[NotebookDirectory[]], "numerics",
      "newhall.mathematica.h"}], BinaryFormat → True, PageWidth → Infinity];
  WriteString[
    file,
    FromCharacterCode[16^ef] <> FromCharacterCode[16^bb] <> FromCharacterCode[16^bf] <>
    "// Generated by Mathematica. DO NOT EDIT!\r\n",
    "// source: mathematica/newhall.nb\r\n",
    "\r\n",
    "#include <array>\r\n",
    "\r\n",
    "#include \"numerics/fixed_arrays.hpp\"\r\n",
    "\r\n",
    "namespace principia {\r\n",
    "namespace numerics {\r\n",
    "  \r\n",
    "  using namespace principia::numerics::_fixed_arrays;",
    "  \r\n",
    "  \r\n";
  Do[
    WriteString[
      file,
      FlattenedMatrixToCDefinition[
        "FixedMatrix", "double", ToString[degree] <> " + 1", "2 * 8 + 2",
        ToString["newhall_c_matrix_чебышёв_degree_", CharacterEncoding → "UTF8"] <>
          ToString[degree] <> "_divisions_8_w04",
        Drop[NewhallC[degree, 8, 4 / 10], -4]]];
    WriteString[
      file,
      FlattenedMatrixToCDefinition[
        "FixedMatrix", "double", ToString[degree] <> " + 1", "2 * 8 + 2",
        "newhall_c_matrix_monomial_degree_" <> ToString[degree] <> "_divisions_8_w04",
        NewhallMonomialC[degree, 8, 4 / 10]],
      {degree, 3, 17}];
    WriteString[
      file,
      "} // namespace numerics\r\n",
      "} // namespace principia\r\n";
  Close[file];

```

Save a pdf printout of this file for documentation purposes.

```

In[46]:= printout =
  FileNameJoin[{DirectoryName[NotebookDirectory[]], "documentation", "newhall.pdf"}];
  NotebookPrint[EvaluationNotebook[], printout]

```
